

Himani Nihalani

Jaipur, India | github.com/himaninihalani | linkedin.com/in/himani-nihalani

PROFESSIONAL SUMMARY

Third-year Computer Science (AI) student passionate about building modern web applications and solving problems through code. Currently strengthening foundations in Data Structures & Algorithms while developing projects using modern web technologies.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science - AI 2024-2028
Poornima Institute of Engineering & Technology

TECHNICAL SKILLS

Languages: C, C++, Java, Python
Frontend: HTML, CSS, Next.js (React)
Tools: Git, GitHub
Currently Learning: Data Structures & Algorithms, Problem Solving Patterns

EXPERIENCE

Intern 1.5 Months
STPI (Software Technology Parks of India)

- Recently completed a 1.5-month internship at STPI.
- Built the PaperSetu conference management system as part of the internship.

Vice Captain & Captain - WISE Club, Students' Council 2024-2026
Poornima Institute of Engineering & Technology (Women in Science and Engineering)

- Led and coordinated student-led technical and community initiatives within the WISE Club.
- Assisted in organizing technical events, workshops, and collaborative activities for students.
- Worked closely with the student council team to improve participation and engagement.
- Developed leadership, teamwork, and communication skills while managing club responsibilities.

Industrial IoT Training 30 Days
CSIR CEERI, Jaipur

- Completed a Skill Development Training Program on Advanced Industrial Internet of Things (IIoT) under the RIICO Skill Development Initiative.
- Gained hands-on exposure to industrial automation systems and IoT architecture.
- Learned how connected devices are used in real-world industrial monitoring and control systems.
- Explored practical applications of IoT technologies in manufacturing and industrial environments.

HACKATHON ACHIEVEMENTS

- **META MIND Hackathon 2025** – Secured 3rd Place while competing as part of Team The Underdogs.
- **HackStorm Hackathon** – Achieved 8th place out of 300 teams in a 24-hour competitive hackathon.
- **Smart India Hackathon (SIH)** – Secured 3rd Position in the College Round (Hardware Category).
- Collaborated with team members to design solutions, build prototypes, and present ideas under strict time constraints.

PROJECTS

Python Voice Assistant with LLM-Powered Intent Understanding

Python, Groq API (Llama-3.3-70b-versatile)

- Built a Python voice assistant that understands spoken commands using LLM-powered intent understanding.
- Designed a hybrid architecture: a fast local intent matcher handles known commands, with an LLM fallback for everything else.
- Growing set of tools the assistant can call to carry out actions.
- Added a data logging pipeline to collect interactions, aimed at fine-tuning a small open-source model (e.g. Llama 3.2 3B) on my own data.

PaperSetu - Conference Management System

Django, SQLite, PostgreSQL (psycopg3), Render

- Team project built during my internship: a full-stack conference management system with an integrated payment gateway.
- Structured as three Django apps (accounts, conference, dashboard), deployed on Render with PostgreSQL in production and SQLite for local development.
- As Database Engineer: designed the schema, the custom User model and the Conference and Paper models, and wrote the Django ORM data layer and CRUD operations.
- Handled module testing and bug-fixing, plus migration diagnostic scripts for the dual-database setup.

CORE COMPETENCIES

- Problem Solving
- Technical Leadership
- Secure Coding Practices
- Performance Optimization
